

**Patient name: Meera Kapoor**

- **Age:** 29
- **Medical History:** Lupus anticoagulant positive (APLA syndrome)
- **Symptoms:** Recurrent pulmonary embolism, leg swelling
- **Diagnosis:** MPE with lupus-related thrombophilia
- **Ongoing Treatment Plan:**
  - **Immediate Management:** IV Heparin, bridge to Warfarin (INR goal 3.0-3.5)
  - **Anticoagulation:** Lifelong Warfarin therapy (high-risk patient)
  - **Supportive Care:** Supplemental oxygen PRN
  - **Long-term Therapy:** Consideration for IVC filter placement
  - **Monitoring:** Weekly INR checks, lupus flare monitoring
  - **Additional Considerations:** Avoid NSAIDs, immunosuppressant review
